13-vane diffuser rotated 180 degrees from its original position and an NACA designed 18-vane diffuser were used to determine the effect of the diffuser-vane location with respect to the supercharger outlets. The 18 vanes of the diffuser correspond to the 18 outlets of the supercharger. The effect of flow conditions at the impeller inlet was investigated by distorting the flow at the inlet and noting the effect in the supercharger outlets. An NACA vaneless diffuser was used in this investigation to eliminate the diffuser-vane effect.

process. Technical, Economic, failure analysis of the locomotives. Extensive references. End notes. Five pictures. covers the development process of "The Baltimore Engines"

Ever since the Industrial Revolution debate has raged about the sources of the new, sustained western prosperity. Margaret Jacob here argues persuasively for the critical importance of knowledge in Europe's economic transformation during the period from 1750 to 1850, first in Britain and then in selected parts of northern and western Europe. This is a new history of economic development in which minds, books, lectures and education become central. She shows how, armed with knowledge and know-how and inspired by

the desire to get rich, entrepreneurs emerged within an industrial culture wedded to scientific knowledge and technology. She charts how, across a series of industries and nations, innovative engineers and entrepreneurs sought to make sense and a profit out of the world around them. Skilled hands matched minds steeped in the knowledge systems new to the eighteenth century to transform the economic destiny of western Europe.
