I just completed a clean install on one of my PC's. I am using Windows 10 and I need to setup my development environment. I thought to document the steps for anyone that is starting out in web...

~~A beginners guide to setting up a modern web development~~

Develop for specific devices Windows-based PCs Build desktop applications that target PCs running Windows by using platforms including the Universal Windows Platform (UWP), .NET, and the Windows API (Win32).

~~Start developing for Windows~~

There are several ways to develop Windows-based applications with .NET Framework. You can use any of these tools and frameworks: Universal Windows Platform (UWP) Windows Presentation Foundation (WPF) Windows Forms. This section contains articles that describe how to create Windows-based applications by using Windows Presentation Foundation or Windows Forms.

~~Developing Windows based client applications with the .NET~~

Windows forms provide a variety of controls including Button, TextBox, Radio Button, CheckBox, and other data and connection controls. You can easily design a web application using an IDE Microsoft Visual Studio using a variety of languages including C#, Visual Basic, C++, J# and many more.

~~Difference between Windows Application and Web Application~~

Just follow "Developing a dockerized web app on Windows Subsystem for ... the system after turning on or off the Hyper-V or stick to non-native VirtualBox based version of Docker for Windows ...

~~Surprisingly Software Development on Windows is Awesome~~

In Visual Studio 2019, a new project can be created using the ASP.NET Core Web Application template. The recommended choice in the second step of the project creation wizard is Web Application (Model-View-Controller) which will generate a simple sample app. If you're using Visual Studio Code, you can create an equivalent new project from the command line with the following command:

~~Developing Web Applications in .NET (Different Approaches~~

You can access your Windows files from the Ubuntu terminal and use Linux apps and tools on those files and vice-versa. We recommend working in the Linux file system for Python web development given that much of the web tooling is originally written for Linux and deployed in a Linux production environment.

~~Web development with Python on Windows | Microsoft Docs~~

Once you're all set up, the first thing you want to do is enable Windows Developer mode. Head to the Settings app, then "Update & Security" and click "For developers" in the bar on the left. On this screen, choose "Developer Mode" then accept the warning that pops up.

~~How to set up the perfect modern dev environment on Windows~~

When developing applications for business customers, you may or may not have control over what is run as the client, so this will contribute largely to your decision over whether to develop a Thick Client or a Web application. To develop a Thick Client application using Microsoft .NET, you will have to able to dictate that your customer's run some flavor of the Windows operating system, and they will have to install Microsoft .NET as well.

~~Windows or Web Application~~

Unlike static PDF Developing Windows-Based and Web-Enabled Information Systems solution manuals or printed answer keys, our experts show you how to solve each problem step-by-step. No need to wait for office hours or assignments to be graded to find out where you took a wrong turn.
