Raymond Coppinger

Dogs: A Startling New Understanding of Canine Origin, Behaviour, and Evolution was written by behavioural scientists Raymond and Lorna Coppinger who have raised hundreds of different dogs of various breeds, raced sled teams, and published professional and popular works on canine behaviour. This book, their manifesto, covers their views of canine evolution and treatment by humans and offers ...

Excellent summary of current scientific understanding of dogs and their origins. The Coppingers believe dogs evolved from wolves as scavengers around early human settlements. The ideal dog for a companionship that works both ways, in their opinion, is the village, feral, or street dog, a kind of dog that has long fascinated me.

A look at the biological needs and dispositions of our canine companions looks at eight different types of dogs and argues that their domestication evolved from dogs who found an ecological niche for themselves in Mesolithic village dumps.

Two canine ethnologists probe the nature versus nurture debate in the social order of dogs, tracing the origins of canine intelligence.

Biologists, breeders and trainers, and champion sled dog racers, Raymond and Lorna Coppinger have more than four decades of experience with literally thousands of dogs. Offering a scientifically informed perspective on canines and their relations with humans, the Coppingers take a close look at eight different types of dogshousehold, village, livestock guarding, herding, sled-pulling, pointing, retrieving, and hound. They argue that dogs did not evolve directly from wolves, nor were they trained by early humans; instead they domesticated themselves to exploit a new ecological niche: Mesolithic village dumps. Tracing the evolution of today's breeds from these village dogs, the Coppingers show how characteristic shapes and behaviorsfrom pointing and baying to the sleek shapes of running dogsarise from both genetic heritage and the environments in which pups are raised. For both dogs and humans to get the most out of each other, we need to understand and adapt to the biological needs and dispositions of our canine companions, just as they have to ours.

“An informative, well-written book on the evolution of all canids, including the wild types (wolves, coyotes, jackals, and dingoes)...Recommended.”—Choice Of the world’s dogs, fewer than two hundred million are pets, living with humans who provide food, shelter, squeaky toys, and fashionable sweaters. But roaming the planet are four times as many dogs who are their own masters—neighborhood dogs, dump dogs, mountain dogs. They are dogs, not companions, and these dogs, like pigeons or squirrels, are highly adapted scavengers who have evolved to fit particular niches in the vicinity of humans. This book present an eye-opening analysis of the evolution and adaptations of these unleashed dogs and what they can reveal about the species as a whole. Exploring the natural history of these animals, canine behavior experts Raymond and Lorna Coppingers explain how the village dogs of Vietnam, India, Africa, and Mexico are strikingly similar. These feral dogs, argue the Coppingers, are in fact the truly

Raymond Coppinger

archetypal dogs, nearly uniform in size and shape and incredibly self-sufficient. Drawing on nearly five decades of research, they show how dogs actually domesticated themselves in order to become such efficient scavengers of human refuse. The Coppingers also examine the behavioral characteristics that enable dogs to live successfully and to reproduce, unconstrained by humans, in environments that we ordinarily do not think of as dog friendly. A fascinating exploration of what it actually means, genetically and behaviorally, to be a dog, *What Is a Dog?* is likely to change the way beagle or bulldog owners reflect on their four-legged friends.

Two experts, drawing on decades of research and field experiments, unlock the origins of many of our dogs most common, most puzzling and most endearing behaviors, and explore such canine mysteries as why dogs play, why they bark, how they feed and forage, why they guard and herd and much more.

If you're familiar with the world of hunting, you know how important dogs are in the field. Less known, however, is how vital these canines are to fishermen. For many anglers, packing your tackle and wading through the river without a trusted fishing dog is a recipe for disaster. In *Fishing Dogs*, Raymond Coppinger sheds light on the true value of fishing dogs of every size, shape, and color. Monsoon dogs, for example, lay in the bilge of boats until they are disturbed by the shipping of water. At that point, they rise up out of the bilge and unleash with tremendous power a series of epicentric rotational reciprocations, thus expelling inches of boat-threatening water. Coppinger also introduces readers to the Maine bowplunk dog, which received its name from its deeply ingrained habit of standing, proud and brave, on the bow of his master's boat as it moves through the choppy waters off Maine's coast. As a biologist, distinguished fisherman, and a known storyteller and fan of satire, Coppinger is more than qualified to discuss the various breeds of fishing dogs, in addition to topics as the evolution of dogs from wolves, the dangers of crossbreeding, and finding a fisherman's perfect fishing dog. Skyhorse Publishing is proud to publish a broad range of books for fishermen. Our books for anglers include titles that focus on fly fishing, bait fishing, fly-casting, spin casting, deep sea fishing, and surf fishing. Our books offer both practical advice on tackle, techniques, knots, and more, as well as lyrical prose on fishing for bass, trout, salmon, crappie, baitfish, catfish, and more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to publishing books on subjects that are sometimes overlooked by other publishers and to authors whose work might not otherwise find a home.

Recounts the author's ambitious quest to run the Iditarod, an 1,180-mile trek of snow and deep cold, and his seventeen-day journey with a team of dogs during which they endured blinding wind, snowstorms,

frostbite, moose attacks, and hallucinations. Reprint.

The perfect gift for dog lovers and readers of Inside of a Dog by Alexandra Horowitz—this New York Times bestseller offers mesmerizing insights into the thoughts and lives of our smartest and most beloved pets. Does your dog feel guilt? Is she pretending she can't hear you? Does she want affection—or just your sandwich? In their New York Times bestselling book The Genius of Dogs, husband and wife team Brian Hare and Vanessa Woods lay out landmark discoveries from the Duke Canine Cognition Center and other research facilities around the world to reveal how your dog thinks and how we humans can have even deeper relationships with our best four-legged friends. Breakthroughs in cognitive science have proven dogs have a kind of genius for getting along with people that is unique in the animal kingdom. This dog genius revolution is transforming how we live and work with dogs of all breeds, and what it means for you in your daily life with your canine friend.

Dog trainers face ethical decisions all the time. Do I keep working with a client when it is obvious that the owner will not keep up the training program I recommend to the detriment of the dog? Should I accept payments from other dog professionals to whom I refer clients? What is the proper way to interact with other dog trainers who use methods I disagree with? Author Jim Barry dives deep into the ethical questions frequently faced by dog trainers and offers up a systematic approach (his SITSTA method) to helping trainers resolve difficult dilemmas.

Offers young readers a practical guide to understanding dog behavior, including knowing how to approach an unfamiliar dog, making a shy dog feel comfortable, interpreting important signs properly, and more.
