Adjusting electronic ignition on 2-stroke stator kits
Flywheel now marked with a static 'F' mark and TDC.
You can add extra marks either side of the 'F' mark, however there is no need to mark every degree. Every 2 or 5 degrees is usually sufficient. Make these marks shorter, so that the static mark remains clearly defined.

So what I want is to cut out the electronic module (which includes the cdi) and just use the 2 coils (magneto in top right of the diagram) and built a cdi to power the ignition coil and get spark. I have looked all over and can not find a replacement module so this is a last option.

This changing gap causes the current in the pickup coil to be zig-zag. When the cam is parallel to the permanent magnet there is an electric current, but when the cam shifts the current disappears. This drop voltage is used as timing to break the primary current in the ignition coil. Transistorized Ignition System diagram

Moving from points to Boyer electronic ignition is a pretty simple upgrade. From a wiring perspective, the most important thing to note is that you will be moving from a pair of coils that are wired in parallel to series. Originally, the points make and break the positive (earth) side of each coil in turn.
