Fifty Years of Magnetoencephalography celebrates the first half century of research in and clinical applications of magnetoencephalography (MEG). It catalogs and documents its evolution as a means of imaging the ongoing activity of the brain and the activation of particular neuronal networks within it that mediate sensory motor and higher functions like language. The volume's first section looks at the discovery of MEG and its first tentative applications by three of its founders. The following sections detail the rapid progress in the development of the instrumentation necessary for recording noninvasively the magnetic signals on the head that are associated with the brain activity; improvements in the techniques for analyzing the magnetic signals and reconstructing, on their basis, the functional images of brain activity; and improvements in our understanding of the nature and significance of those signals. Subsequent sections of the book detail the main clinical applications of MEG in localizing brain areas that contain sources of epileptiform activity and areas encompassing parts of functional networks essential for motor and sensory function as

Health security is dependent on many factors such as: individual government policies and regulations; budgets; management systems; and the collection, analysis, use, and protection of data. Telemedicine has the potential to change how healthcare is delivered around the world, and has developed to the point where it is possible for its use to become commonplace. The questions are, however, whether and how the use of telemedicine will improve health security in Southeast Europe. This book presents papers from the NATO Advanced Research Workshop (ARW) on Benchmarking Telemedicine: Improving Health Security in the Balkans, held in Skopje, Macedonia, in November 2016. The aim of the workshop was to bring together people from a wide range of sectors within the telemedicine community with representatives of NATO Member and Partner countries to share information and develop solutions to health security issues. Participants addressed issues such as cyber security for the implementation of telemedicine; healthcare capabilities of deployed and local medical equipment; learning methods; information sharing among local professionals; prevention and control of infectious diseases; best practices of telemedicine among NATO Member and Partner countries; integration of telemedicine across regions and borders; and telemedicine implementation. The book will be of interest to all those wishing to gain a better insight into the implications of telemedicine for health security.
