Effectively avoiding, recognizing, and managing complications is integral to your operative success. Let a multidisciplinary team of experts in otolaryngology, plastic surgery, oral and maxillofacial surgery, and general surgery guide you through the full range of complications associated with every type of head and neck procedure . . . so you will be equipped to produce the most favorable outcomes for even the most challenging cases! Expert, comprehensive, multidisciplinary coverage of head and neck complications helps you to safely incorporate new surgical techniques into your practice. An emphasis on complication prevention and recognition assists you in avoiding the "complication cascade." Coverage of both acute and long-term care of patients with head and neck complications prepares you to make effective choices in both instances. A new "Quality of Life" section examines the controversies that often surround selecting one procedure over another, illuminating why certain procedures aren't always best for some patients. A new section on complications of facial plastic and reconstructive surgery equips you to perform these techniques with greater confidence. A consistent, practical chapter format helps you focus on key clinical and surgical considerations. A new, more cohesive full-color illustration program richly captures visual nuances of clinical presentation and operative technique. A bonus

CD-ROM allows you to use all of the images from the book in electronic presentations.

Oral, Head and Neck Oncology and Reconstructive Surgery is the first multidisciplinary text to provide readers with a system for managing adult head and neck cancers based upon stage. Using an evidence-based approach to the management and treatment of a wide variety of clinical conditions, the extensive experience of the author and contributors in head and neck surgery and oncology are highlighted throughout the text. This includes computer aided surgical simulation, intraoperative navigation, robotic surgery, endoscopic surgery, microvascular reconstructive surgery, molecular science, and tumor immunology. In addition, high quality photos and illustrations are included, which are easily accessible on mobile devices. Management protocols and outcomes assessment provide clear guidelines for managing problems related to adult head and neck oncology and reconstructive surgery. State-of-the art guidance by recognized experts details current techniques as well as technological advances in head and neck/cranio-maxillofacial surgery and oncology. Evidence-based content details the latest diagnostic and therapeutic options for treating a wide-variety of clinical problems with an emphasis on surgical technique and outcomes. Multidisciplinary approach reflects
