The Industrial Revolution produced injury, illness and disablement on a large scale and nowhere was this more visible than in coalmining. Disability in the Industrial Revolution sheds new light on the human cost of industrialisation by examining the lives and experiences of those disabled in an industry that was vital to Britain's economic growth. Although it is commonly assumed that industrialisation led to increasing marginalisation of people with impairments from the workforce, disabled mineworkers were expected to return to work wherever possible, and new medical services developed to assist in this endeavour. This book explores the working lives of disabled miners and analyses the medical, welfare and community responses to disablement in the coalfields. It shows how disability affected industrial relations and shaped the class identity of mineworkers. The book will appeal to students and academics interested in disability, occupational health and social history.

The Americans focuses on nine themes: Diversity and the national identity; America in world affairs; Economic opportunity; Science and technology; Women and political power; Immigration and migration; States' rights; Voting rights; Civil rights. - p. [xxviii].

Places the British Industrial Revolution in global context, providing a fresh perspective on the relationship between technology and society.

Andrew Ure (1778-1857) was a professor at the University of Glasgow and an enthusiast for the Industrial Revolution's new systems of manufacturing. As we know, a consequence of these new developments was the redundancy of many workers, just as we are experiencing today with 'downsizing' and 'reengineering'. This study details the creation of the general education system as an answer to the need for less self-willed and intractable workmen, which were unfit to become "components of a mechanical system". In our times of permanent technological revolution, this is an excellent insight into the roots of industrial progress. Understanding rural workers' shock and their need to readapt to a new urban, factorial reality, and the white collar workers' dilemma of social security or entrepreneurship is achieved by this fascinating and important book.

Published by OpenStax College, U.S. History covers the breadth of the chronological history of the United States and also provides the necessary depth to ensure the course is manageable for instructors and students alike. U.S. History is designed to meet the scope and sequence requirements of most courses. The authors introduce key forces and major developments that together form the American experience, with particular attention paid to considering issues of race, class and gender. The text provides a balanced approach to U.S. history, considering the people, events and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience).

Why Enlightenment culture sparked the Industrial Revolution During the late eighteenth century, innovations in Europe triggered the Industrial Revolution and the sustained economic progress that spread across the globe. While much has been made of the details of the Industrial Revolution, what remains a mystery is why it took place at all. Why did this revolution begin in the West and not elsewhere, and why did it continue, leading to today's unprecedented prosperity? In this groundbreaking book, celebrated economic historian Joel Mokyr argues that a culture of growth specific to early modern Europe and the European Enlightenment laid the foundations for the scientific advances and pioneering inventions that would instigate explosive technological and economic development. Bringing together economics, the history of science and technology, and models of cultural evolution, Mokyr demonstrates that culture—the beliefs, values, and preferences in society that are capable of changing behavior—was a deciding factor in societal transformations. Mokyr looks at the period 1500–1700 to show that a politically fragmented Europe fostered a competitive "market for ideas" and a willingness to investigate the secrets of nature. At the same time, a transnational community of brilliant thinkers known as the "Republic of Letters" freely circulated and distributed ideas and writings. This political fragmentation and the supportive intellectual environment explain how the Industrial Revolution happened in Europe but not China, despite similar levels of technology and intellectual activity. In Europe, heterodox and creative thinkers could find sanctuary in other countries and spread their thinking across borders. In contrast, China's version of the Enlightenment remained controlled by the ruling elite. Combining ideas from economics and cultural evolution, A Culture of Growth provides startling reasons for why the foundations of our modern economy were laid in the mere two centuries between Columbus and Newton.
