"Landscape Estimating and Contract Administration" provides descriptions of various stages of a landscape project, from the feasibility study to the expiration of the guarantee period. This comprehensive guide to the landscape business presents an overall view of the process of completing a large landscape project, and helps foster an understanding of how the landscape industry works. Topics include how to create estimates, engaging in the bidding process, how to prepare contracts, how to prepare a budget, and how to utilize financial accounting.

Explains how to make a lawn safe and environmentally friendly using organic methods, and how to pick the best grass for each climate and sunlight situation.

Landscape Construction, 3rd edition, will help your students understand the process of construction and implementation of a multitude of exterior hardscape construction projects. This book begins with the preparation for construction and follows through to the installation of the final elements of the landscape project. Your students will appreciate the detailed discussions about site preparation, grading and drainage, utilities and irrigation, retaining wall construction, paving, exterior carpentry and fencing and free-standing walls. Such amenities as pools, ponds, and edging are also discussed in detail. All instructions are well supported by photos and illustrations. Each section contains thorough installation information for most of the contemporary materials used in today's landscapes. David Sauter has provided your students with expert perspective on materials and techniques, as well as easy-to-follow instructions. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Irrigation methods and components Drawing techniques and presentation Sprinkler and drip irrigation methods and hardware Pipe characteristics and hydraulics Control systems CSI irrigation specifications

This book is a quick and easy-to-use reference guide for choosing plant material for landscape designs. This reference manual includes comprehensive lists with search criteria for each of the major plant groups, including trees, shrubs, groundcovers, perennials, vines, grasses, and ferns. These plant groups contain hundreds of specific species, varieties, and cultivars that are readily available in the marketplace from the major production nurseries. Landscape architects, designers, contractors, or anyone who designs with plants, can easily choose plants that will work on their site. The book is technical enough for the professional, yet simple enough to be used by the layperson. Both botanical and common names are used and an extensive amount of cultural and environmental information is presented. While many other books of this kind give only basic information such as sun/shade, height/width, there are so many as 30 specific categories for each plant group. The categories cover such important criteria as light and soil requirements, zone hardiness, height and width, pest and disease susceptibility, urban tolerance, and tolerance to salt and drought. The lists also include many criteria often overlooked such as growth rates, overall messiness, root systems, minimal fall clean up, maintenance levels, soil PH and landscape value/use, and many visual characteristics such as texture, foliage color and fall colors, bloom colors and seasons, shapes and forms, attractive bark and foliage and more. There is also a candid Pros & Cons section covering some realistic considerations for each of the plant species groups.

After its bestselling first edition from 1993, the "Landscape Restoration Handbook" returns with many new features and enhancements. Updated and expanded information includes a new chapter on ecological restoration types; an appendix on ecological restoration resources (professionals, organizations, natural heritage programs, web sites); and an appendix on regulatory considerations for wetland restoration.
