Preface MATHEMATICS POWER FOR SECONDARY SCHOOLS (MPFS) series are specially written for secondary school learners, developing the four years secondary school mathematics course. Book 1 is the first book in the series and it is specially for learners in their first year of secondary school. Other readership involving secondary school teachers, tutors and learners in Teacher Training Colleges (for both primary and secondary schools), Technical schools and institutes, etc. may find the series selectively important to their learning or class work preparations. Finally, adult learners who wish to further their knowledge in secondary school mathematics may too find the series important to them. The purpose of the series is to provide a well structured approach in numerical and analytical secondary school mathematics knowledge and skills. The organization and presentation is such that all the work is logical, coherent, comprehensive and objectively handled to equally cater for the average and the more able students. In a systematic manner using clear instructional language for explanatory notes, worked out examples, illustrations, tables, figures, etc. the book allows the reader sufficient involvement in mathematical reasoning, convenient work rate, comprehension, and to stimulate interest in the subject being studied. The concepts are related to real life experiences in order to enhance their methodical treatment as much as possible. For the learners' practice and assessment, brain storming trial questions, graded exercises, revision exercises and examination type papers are provided. Suleiman Luutu Namielu Educational

This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we're teaching this discipline. Helping Children Learn Mathematics provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre-kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.
