We can write absolute value functions as piecewise functions – it's really cool! You might want to review Solving Absolute Value Equations and Inequalities before continuing on to this topic. Let's say we have the function $f(x) = |x|$. From what we learned earlier, we know that when x is positive, since we're taking the absolute value, it will still just be x .

Evaluating. Consider the piecewise function below. It consists of two functions with different domains. It says that if x is smaller than or equal to 2, the formula for the function is $f(x) = -x$. If x is greater than 2, the formula is $f(x) = x$. The domain of function f is the set of all real numbers, since f is defined everywhere for all real numbers.
