Predator-Prey Interactions

Predation is a density-dependent limiting factor—it is affected by the number of individuals in a given area.

Read Free Predator Prey Population Biokit Answer

For example, the population of a predator can be limited by the amount of prey available. The opposite is true as well. The population of a prey species can be affected by changes in its predator population.

Predator Prey Population
Biokit Answer

Read Free Predator Prey Population Biokit Answer

Predation is an example of a biotic factor that influences the size of a population (see the figure to the right). Predation is an interaction between species in which one species (the predator) uses another

Read Free Predator Prey Population Biokit Answer

species as food (the prey). Predation often leads to an increase in the population size of the predator and a decrease in the population size of the prey.

3. Most biology textbooks describe that predators and

Read Free Predator Prey Population Biokit Answer

prey exist in a balance.
This "balance of nature"
hypothesis has been
criticized by some
scientists because it
suggests a relationship
between predators and prey
that is good and necessary.

Read Free Predator Prey Population Biokit Answer

Opponents of this hypothesis propose the following questions:

Deer: Predation or
Starvation

7. Base your answer to the following question on the
